- Only shortlisted candidates will be contacted through email for the online interview.

*Immediate Joining is requested from the selected candidate.

About the Project - The project will be focussed on developing a scalable model of integrated emergency and injury care at Health & Wellness centre to strengthen post-crash response by conducting assessments and developing model intervention packages for both HWC & community.

The global total addressable deaths and DALYs that can be averted amount to 24.3 million and 1023 million lives respectively. In South-East Asia alone, 90% of deaths and 84% of disability-adjusted life years (DALYs) are due to emergency and trauma conditions. Road Traffic Injuries are one of the major leading causes of deaths in India. RTIs alone contribute to more than 1.5 Lakh deaths annually with an estimated loss of 3- 5% GDP.

The project site will be PHC of Udaipur; the selected coordinators will have to stay most of the time at the PHC of Udaipur and will also get the opportunity to work with community by conducting community survey, train the community on post-crash response to prevent road accident deaths.

About our Organization - World Health Organization Collaborating Centre for Emergency and Trauma Care - South-East Asia Region (WHO CCET-SEAR) is an international public health organization working with a vision to transform lives of acutely ill and injured by developing an accessible, prompt, affordable, and responsive emergency care system in South-East Asia Region. WHO CCET- SEAR works with global, regional and local government bodies and private organizations to solve the world's most pressing emergency care challenges through system building, capacity building, leadership & governance, research and education, policy making, dissemination of cost – effective technologies and community engagement.
